

2. Fecasol -sodium nitrate solution (floatation media)

3. Cover slips and glass slides.

Procedures :

- a. Place the fecal sample on a clean empty film canister... and prepare the glass slide.

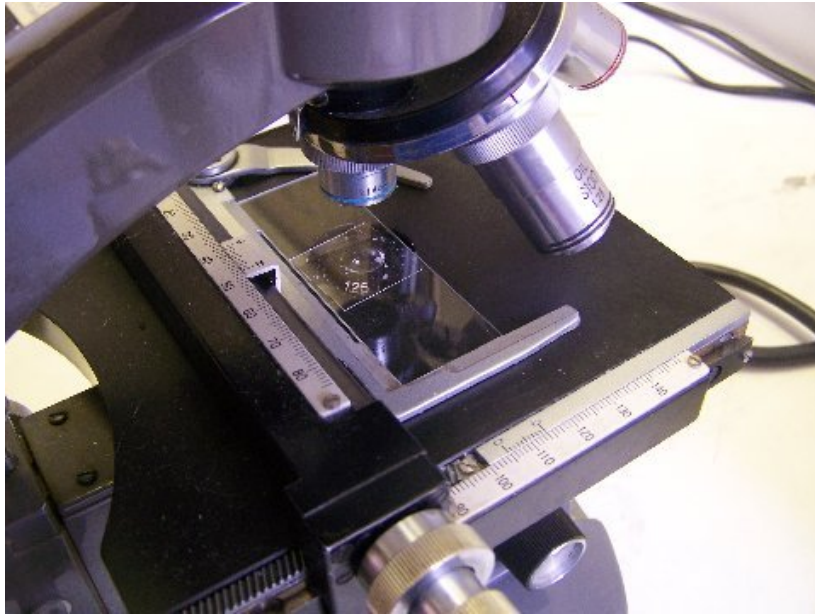

- b. Wait for a few minutes for the eggs to float.. (if there are eggs)

Dip the edge of the cover slip into the fecal with sodium nitrate solution..

d. Place the glass slide with cover slip into the stage of the microscope...
your specimen is now ready to be observed for parasites...

e .Result --- negative... (no need to give any deworming ,or anything for coccidia)
